DETAILED ACTION

This Office action is in response to amendments and remarks filed on 9/27/2006.

Drawings

Replacement drawings submitted on 9/27/2006 are accepted.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Eric King on 12/7/2006. The amendments are to overcome possible objections and rejections under 35 USC 112 and rejections under 35 USC 101. Note that the addition of "storage means" as part of the system of claim 47 avoids the system being interpreted as being directed towards software per se as "storage means" is disclosed in the specification as hardware. As the content of the interview with Mr. King has been summarized herein, a separate interview summary form is not provided as per MPEP 713.04.

The application has been amended as follows:

AMEND THE FOLLOWING CLAIMS AS FOLLOWS:

Claim 29 (currently amended):

A process for creating and managing certificates for pairs of asymmetrical cryptographic keys, each certificate being intended for a pair of asymmetrical cryptographic keys for a user managed by a computer system, said process comprising:

searching in storage means for at least one user for which a certificate must be created, each user associated with a status associated with one or more attributes, wherein each of said one or more attributes is capable of having any one of the following values: ~~value of~~ pending, in progress, process ended with an error message, process done, sending a creation request, and done;

creating, based on the one or more attributes, at least one individual certification request for certifying a public key;

transmitting a certification authority request corresponding to said at least one individual certification request to a certification authority and issuing a first certificate in accordance with said certification authority request; and

~~creating each of said~~ at least one individual certification requests from a corresponding multiple certification request recorded in the storage means relative to a set of users belonging to a preset list, or to a set of users defined by predetermined criteria, as well as relative to model pairs of keys and associated model certificates for either of said sets of users.

Claim 47 (currently amended):

A computer system that creates and manages pairs of asymmetrical cryptographic keys and certificates associated with the pairs of keys, the pairs of keys

Art Unit: 2135

and the certificates being intended for users managed by said computer system, comprising:

a key generating center that creates at least one pair of keys at the request of a local registration authority with which the key generating center communicates;

at least one certification authority to which the computer system has access for creating a certificate at the request of the local registration authority; and

means for automating, based on one or more attributes associated with one or more users, the creation and/or certification of at least one pair of keys for each user managed by said computer system, wherein each attribute is capable of having any one of the following values: pending, in progress, process ended with an error message, process done, sending a creation request, and done; and

storage means;

wherein said computer system is configured to form said created request of a local registration authority from a corresponding multiple certification request recorded in the storage means relative to a set of users belonging to a preset list, or to a set of users defined by a predetermined criteria, as well as relative to model pairs of keys and associated model certificates for either of said sets of users.

Claims 51-52, 63-66 (Cancelled).
